Issue(s)	Additional Notes	Proposed Solution
No data found for this school because the last name, [redacted] is the only name considered for this claimant.		The rule related to the validation of only AKA Surnames should be modified to apply only for female claimants.
No data found for this school because the last name, [redacted] is the only name considered for this claimant.		
Known issue related to the handling of months and seasons. Currently being resolved with SC.	Months not identified rather instead seasons are used. Starting with "03" (Fall) and ending with "04" (Spring).	On hold.
Known issue related to the handling of months and seasons. Currently being resolved with SC.	Months not identifed rather instead seasons are used. Starting and ending season always identified as "03" (Fall).	On hold.
Known issue related to the handling of months and seasons. Currently being resolved with SC.	Months not identified rather instead seasons are used. Starting with "03" (Fall) and ending with "01" (Winter).	On hold.
The AKA surname of "[redacted] not available in the original SC data. Where did Research get this AKA? When this AKA is used in CAR's evaluation 2 years are identified for pay.	Student started in March (03) and completed in September (09)?	Research must follow business rules that are consistent with the CAR rules when identifying discrepancies.
Student grouping methodology was not executing properly. Corrections implemented and correct years being found. This was an implementation issue.		Document GAP Issues that CAR Engine cannot compensate for. Research must follow business rules that are consistent with the CAR rules when identifying discrepancies.

An additional year in 1965 is not found for _____ because the student number (515) is different than the student number previously identified with _____ (402) at SLT.		Research must follow business rules that are consistent with the CAR rules when identifying discrepancies.
The additional year found was not due to an improperly processed non-residency flag but rather because there is an additional record found in 1934 for "_____" with the same student number (0365) as the other 8 records found.	Research interpretation is incorrect in that the two years that non-attending flags appears are years in which only one quarter of the four quarters found identify non-residency.	Research must follow business rules that are consistent with the CAR rules when identifying discrepancies.
An additional year in 1965 is not found for _____ because the student number (01285) is different than the student number previously identified with _____ (0987) at ERM.		Research must follow business rules that are consistent with the CAR rules when identifying discrepancies.
Second record for 1963 not found because need Legal Surname to identify which is against BR for this situation. NOTE: 1963 does not have a student number but found record does.	Duration identified in 1966 for one month, September (09). Two durations for one school identified.	Research must follow business rules that are consistent with the CAR rules when identifying discrepancies.
Initial data parsing issue identified fixed. Awaiting more information from Research.	End month should be "06" to identify the end of the quarter attended.	Student grouping methodology was not executing properly. Corrections implemented and correct years being found. This was an implementation issue.

Initial data parsing issue identified fixed. Awaiting more information from Research.	Starting month identified as August (08) rather than September (09).	Student grouping methodology was not executing properly. Corrections implemented and correct years being found. This was an implementation issue.
Initial data parsing issue identified fixed. Awaiting more information from Research.	Starting month identified as August (08) rather than September (09).

1.) Run the sp_CAR_Accuracy_Report in the database instance you are using.

2.) Copy from the ScClaimantID column to the Pass column in the second results pane.

3.) Paste the copied fields over the TID (ScClaimantID) column to the Pass column below. **DO NOT CO**

4.) Update the corresponding ProtoSchoolYearPaid cells for the rows associated by TID from the FixShee

5.) The caluclations for Accuracy and Validation are no available for reference.

Risks/ Analysis Notes
Car Engine finds 4 years for 1976, 1978, 1980 and 1981. There are records for other years but without enough data to justify grouping the data together for the student.
Car Engine finds 3 years (1963 - 1965) at PLD for 1738 and 12 years (1950 - 1951, 1953 - 1963) at MDD for 364. 1952 at PLD disqualified because 364 non-attending for all four quarters. Verified in Summation database; Research wrong?
Car Engine finds 8 years (1947 - 1951, 1956 - 1958) at PLD for 1145. Primary documents are missing at PLD for 1952 - 1954 with only one primary document available in 1955 but if inferred this will result in 12 years being identified.
Car Engine finds 1 year (1961) at PAR for 791, 1 year (1963) at GDC for 260 and 3 years (1964 - 1965, 1968) at SPR for 341. Non-attending in 1962 for 260 at GDC. Day student in 1966 - 1967 at SPR.
Car Engine finds 9 years (1939 - 1947) at CFT for 0151. Verified in Summation database; Research wrong?
Car Engine finds 6 years (1968 - 1973) at MIK for 01125. Verified in Summation database; Research wrong?
Car Engine finds 5 years (1963 - 1968) at OLD for students 379, 399 and 480 (all students group according to rules regarding dissimilar student numbers with same DOB to claimant). Issue related to key phrase "Day Pupil" being populated instead of accepted delimiters causing the last year to not be flagged as non-resident.
Car Engine identifies 1 year (1979) at JOE for student " ". Two other years present for another student with a similar name and identical birthday but scoring too low to group said student with claimant.

/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The end date associated with the best student bin is after the claimant's 22nd birthday.
/ The schools attended by the applicant are found out of order with the applicant-provided order. / The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the average surname quality is less than 40% / The quality score associated with the student bin identity score is less than 47%.
/ The quality score associated with the average middle name quality is less than -70%. / The quality score associated with the student bin identity score is less than 47%.

/ The duration quality score for the student bin is less than 5.5%. / The end date quality score for the student bin is less than 3%. / The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The end date associated with the best student bin is after the claimant's 22nd birthday.
/ The quality score associated with the average of gender is less than 5%.
/ The quality score associated with the average middle name quality is less than -70%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the average of gender is less than 5%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average surname quality is less than 40% / The schools attended by the applicant are found out of order with the applicant-provided order.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The duration quality score for the student bin is less than 5.5%. / The start date quality score for the student bin is less than 6%.
/ The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%

/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The period of time at which an applicant is identified as having attended two or more schools during the same year exceeds more than one transition year (i.e. a transfer mid year).
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average middle name quality is less than -70%. / The quality score associated with the average surname quality is less than 40% / The quality score associated with the student bin identity score is less than 47%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average surname quality is less than 40%
/ The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the average middle name quality is less than -70%. / The quality score associated with the student bin identity score is less than 47%.

/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the student bin period matching score is less than 9%. / The schools attended by the applicant are found out of order with the applicant-provided order.
/ The quality score associated with the average surname quality is less than 40%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the average age quality is less than 19%. / The quality score associated with the average surname quality is less than 40% / The quality score associated with the student bin identity score is less than 47%. / The schools attended by the applicant are found out of order with the applicant-provided order.
/ The quality score associated with the average date of birth quality is less than -50%.
/ The quality score associated with the average middle name quality is less than -70%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The duration quality score for the student bin is less than 5.5%. / The quality score associated with the average surname quality is less than 40% / The start date quality score for the student bin is less than 6%.
/ The quality score associated with the average date of birth quality is less than -50%.
/ The quality score associated with the average middle name quality is less than -70%.

/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average date of birth quality is less than 50%. / The quality score associated with the average of gender is less than 5%.
/ The quality score associated with the average age quality is less than 19%.
/ The quality score associated with the average date of birth quality is less than -50%. / The quality score associated with the average of gender is less than 5%. / The quality score associated with the average surname quality is less than 40%
/ The quality score associated with the average middle name quality is less than -70%.
/ The quality score associated with the average first name quality is less than -34%. / The quality score associated with the student bin identity score is less than 47%.
/ The quality score associated with the average age quality is less than 19%. / The quality score associated with the average first name quality is less than -34%. / The quality score associated with the student bin identity score is less than 47%.
/ The quality score associated with the average middle name quality is less than -70%.
/ The quality score associated with the average of gender is less than 5%.
/ The start date quality score for the student bin is less than 6%.
/ The quality score associated with the average age quality is less than 19%.

/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average of gender is less than 5%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The duration quality score for the student bin is less than 5.5%. / The period of time at which an applicant is identified as having attended two or more schools during the same year exceeds more than one transition year (i.e. a transfer mid year). / The quality score associated with the average surname quality is less than 40% / The schools attended by the applicant are found out of order with the applicant-provided order. / The start date quality score for the student bin is less than 6%.

Risks
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The end date associated with the best student bin is after the claimant's 22nd birthday.
/ The schools attended by the applicant are found out of order with the applicant-provided order. / The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the average surname quality is less than 40% / The quality score associated with the student bin identity score is less than 47%.
/ The quality score associated with the average middle name quality is less than -70%. / The quality score associated with the student bin identity score is less than 47%.
/ The duration quality score for the student bin is less than 5.5%. / The end date quality score for the student bin is less than 3%. / The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%

/ The end date associated with the best student bin is after the claimant's 22nd birthday.
/ The quality score associated with the average of gender is less than 5%.
/ The quality score associated with the average middle name quality is less than -70%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The quality score associated with the average of gender is less than 5%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average surname quality is less than 40% / The schools attended by the applicant are found out of order with the applicant-provided order.

/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The duration quality score for the student bin is less than 5.5%. / The start date quality score for the student bin is less than 6%.
/ The start date quality score for the student bin is less than 6%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The period of time at which an applicant is identified as having attended two or more schools during the same year exceeds more than one transition year (i.e. a transfer mid year).
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average middle name quality is less than -70%. / The quality score associated with the average surname quality is less than 40% / The quality score associated with the student bin identity score is less than 47%.
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10%
/ The difference between the average quality score associated with the best matching student records and the next best set of matching student records (i.e. those linked to another student) is less than 10% / The quality score associated with the average surname quality is less than 40%
